Course logistics

Ciaran Evans

Course logistics

Completed so far:

- 7 HW assignments
- 2 midterm exams
- numerous in-class activities

What is left:

- HW 8 (optional! I will take your 7 highest HW grades). Practice with SQL
- Project (due December 4)
- Final exam

Class structure:

- A few more days of SQL
- Project work time

Project

Due: December 4

Overview: You will be helping organize an undergraduate student research competition. This involves:

- Sending verification emails to faculty sponsors
- Determining which projects are valid competition entries
- Assigning judges to valid projects according to judging criteria
- Determining winning projects based on judge scores

Note: Most of these steps can be completed in parallel! If you are stuck on an "earlier" step, you can always work on a "later" step.

AI use: AI can only be used for small questions. It cannot generate big ideas and it cannot write important or substantial pieces of code for you. We will have in-class time to work on the project too, so you have me as a resource if you get stuck!

Today

- Activity: SQL murder mystery
- If done early:
  - Could work on HW 8 (writing your own SQL murder mystery)
  - Could start looking at project
  - Could leave early
- Office hours today: changed on 2 - 3:30pm
